

# The Chancel Remodel Proposal

Most basic goal was met to maintain the appearance, grandeur, and majesty of the chancel as it has been for 60 years.

Provide for the choir to face the congregation and be expandable for larger than the normal 24 seats of the worship choir.

Bring the organ out of its current “pit” for easier and safer access and visible presentation venues.

Provides for the piano to be near and accessible from the organ on the platform during presentations and worship services. (safety)

Make most of the “furniture” movable for increased functionality during weddings, plays or concerts beyond the worship services.

Lower the platform, add handrails, and plan for a portable assisted wheelchair ramp when needed to address ADA compliance.
